Quality and profit are achieved by repairing and reassembling the injectors quickly and accurately.

The goal of each operator is assemble and calibrate the injectors once.

A probe controlled by an innovative software, accurate and fast detect all the necessary measures.

The machine with its structure in GRANITE extremely stable, and a joystick for manual use of the program make it reliable and easy to use.

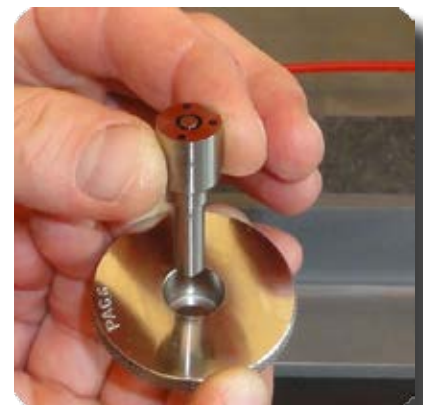

The dimensions of the thickness to be used for the repair of the injectors are indicated at the end of the measuring cycle fully automatic with fast times.

All dimensions are measured in 3 minutes for all types of injectors!

The use of the product is extremely simple so as to illustrate here:

- Select the brand of the injector.
- Positioning of the various components of the injector into the slots.
- Select the part number injector.
- Start the program that automatically indicates the thickness with a tolerance of 0.002 mm

All in 3 minutes!
